Increase in spread of diseases and technological advancements in surgical waste management devices and instruments drive the market. However, lack of regulations for surgical waste management especially in the developing countries such as China, India, Brazil, and others impede the market growth. Moreover, the increase in demand for automation in surgical waste management create lucrative opportunities for key market players.

The surgical waste management market is segmented based on type of waste, service, treatment type, treatment site, and geography. Based on type of waste, the market is bifurcated into nonhazardous waste and hazardous waste (infectious and pathological waste, sharps, pharmaceutical waste, and other medical waste). Based on service, the market is classified into collection, transportation and storage, treatment and disposal, recycling, and other services. Based on treatment type, the market is categorized into incineration, autoclaving, chemical treatment, and other treatments. Based on treatment site, the market is classified into offsite and onsite. By geography, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
