A clinical nutrition product is a type of pharmaceutical product that helps keep a patient healthy. It helps in improving the metabolic system by providing adequate supplements like minerals, vitamins and others. Clinical nutrition diagnosis and treatment of diseases affecting dietary intake, intestinal absorption and metabolism, and helping to promote health through prevention of diet-related diseases.

The COVID-19 pandemic is expected to have a strong influence on the clinical nutrition products

market, as the demand for nutritional management, particularly among children and older population, continues to witness consistent growth. The demand for clinical nutrition products amid the ongoing COVID-19 crisis is on the rise, as consumers are seeking various immunity-boosting alternatives to prevent being infected from the novel coronavirus. The onset of pandemic, older people and patients are at the risk of malnutrition. The infection also causes a severe lack of appetite, along with other symptoms such as anosmia dysgeusia, or diarrhea, both of which raise the risk of disease related malnutrition. Acute malnutrition caused by COVID-19 infection led to increase in loss of muscle mass and a deterioration of immune defenses.
