The logistics automation market consists of sales of logistics automation hardware, software, and services by entities (organizations, sole traders, and partnerships) that are used in warehouses and distribution centers, which help in maintaining huge stocks. Logistic automation refers to the application of computer software or automated machinery to improve efficiency in managing logistics. This helps to replace manual operations and handling equipment with automated facilities and processes. Logistics automation helps develop logistics operations in various end-use industries.

## [Global Logistics Automation Market Trends](#)
