-- Hydroxyzine imine are medications which are intended for an organic disease state when it manifests through anxiety. Hydroxyzine imine is a drug that attenuates activity in the central nervous system. This property aids hydroxyzine imine to treat anxiety and tension associated with psychoneurosis. Besides, it also acts as an antihistamine which reduces the actions of natural histamine in the body and hence can cure symptoms of itching, or hives on the skin. It is also used along with other medications given during and after general anesthesia to produce synergistic effects.

Key factors driving the growth of this market are the increase in population with allergic reactions coupled with rise in geriatric population. However, side effects such as skin rash, dizziness, and severe seizure among others will impede the market growth. Moreover, technological advancements and the increase in R&D investments for the development of novel therapeutic drugs will create more lucrative opportunities for key [hydroxyzine imine market](#) players.
