Organic acids refer to a strong, insoluble organic compound, which is manufactured through fermentation of molasses, starch, biomass, and agro-industrial residues, like sugarcane, citric and fruit peels. It is used in the food and beverage (F&B) sector for enhancing the shelf life of food products. Some of the commonly utilized organic acids encompass formic, gluconic, lactic, benzoic, and gluconic acids.

Organic Acids Market Trends:

The increasing utilization of organic acids as an alternative to antibiotic growth promoters (AGP) in animal feed and the rapid growth in the food and beverage (F&B) sector are primary factors driving the market growth. Additionally, the widespread adoption of organic acids in personal care and cosmetic products is providing a significant boost to the market growth. Apart from this, numerous initiatives undertaken by the governments of various countries for promoting the production of bio-based organic acids from renewable resources are creating a positive outlook for the market.
