The carbon black market consists of the sale of carbon black by entities (organizations, sole traders, and partnerships) that is used as a protective coating for plastics and resistors for electronic circuits. It refers to a fine black powder composed of elemental carbon which is produced by pyrolysis of low-value oil residues and partial burning at high temperatures under controlled process conditions. Carbon black is used to strengthen rubber in tires and acts as a pigment, ultraviolet stabilizer, and conductive or insulating agent in rubber, plastic, ink, and coating applications.
