Security refers to a system of protection against unauthorized access to organizational assets, such as computers, networks, and data. It plays a pivotal role in the modern business strategy, where a loophole can result in undesirable outcomes like theft and losing customer trust and loyalty. As a result, security helps preserve the integrity and confidentiality of sensitive information by blocking access for hackers.

Covid-19 Impact:

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Global Security Market Trends and Drivers:

The market is primarily driven by the increasing number of fraudulent activities. Consequently, the installation of security systems prevents malicious threats and potential security breaches. Besides this, the rising application of security systems in various industries is also contributing to the market growth. For instance, health firms nowadays rely on specialized information systems, such as electronic healthcare records (HER), e-prescribing, clinical decision support, and computerized physician order entry. This increases the need for security from unauthorized access, use, and disclosure. Similarly, information and communication technology (ICT) in the

logistics industry has also adopted these systems for transparency, cost-efficacy, and real-time tracking of goods. Moreover, the development of advanced security systems and the growing popularity of online shopping apps are also creating a favorable market outlook.
