The revenue, production, and manufacturer statistics are thoroughly examined to provide a full picture of the global situation in the Aluminum Foil market. The information will also assist the major market participants and fresh entrants in comprehending the possibilities for investments in the global Aluminum Foil market size.

Some Key Highlights

On 25 October 2021, Johnson Control made its building operators empowered enough to track health and wellness metrics and sustainability while reducing waste, water, and energy use, as well as lowering a building's overall carbon footprint.

The pouches segment is expected to register fastest revenue CAGR during the forecast period. Revenue growth is expected to be driven owing to most adaptable and flexible packaging options available in the market, as they are strong and provide best protection against moisture, chemicals, dust, and other elements, that might degrade quality of stored goods. Aluminum foil pouches are very portable and useful owing to their lightweight. Furthermore, as aluminum can be recycled, producers have countless options for producing pouches with lower manufacturing costs and greater profitability than plastic, which results in a less carbon impact.

The packaging segment accounted for largest revenue share in 2021. This is due to rising demand for packaged, ready-to-eat food, which has contributed to a considerable increase in aluminum foil packaging revenue growth. For instance, in the U.S. food industry accounts for approximately 5% of the GDP as well as there is a rise in demand for protein-based packaged dairy products. Hence, to meet such demands aluminum foil packaging segment is expected to surge and drive revenue growth. Also, recent economic progress and rise in per capita income of the middle class are also driving revenue growth of this segment.

The pharmaceutical segment is expected to register fastest revenue CAGR during the forecast period. Use of aluminum foil in the pharmaceutical industry is limited to blister packaging and lamination-based pouches and bags. These types of packaging are extensively used in packaging tablets, capsules, and candies. Aluminum foil is preferred over any other packaging as the foil protects and prevents drugs from being contaminated by external agents. Furthermore, the packaging cost through aluminum foil is quite cheap and prevents drugs from reacting chemically even during storage and transportation. All these factors are driving revenue growth of this segment during the forecast period.
