Wounds are one of the most common afflictions that affect billions of people worldwide. Wounds can be classified into acute and chronic based on the severity. Acute wounds are often

recovered by natural healing process whereas chronic wounds are hard to heal due to complications from cardiovascular diseases (CVD), obesity, diabetes, and other lifestyle diseases. Wound management is a comprehensive care plan that involves methods, measures, and interventions taken while healing patients with wounds.

Increasing geriatric population across the globe, need for fast acting wound closure devices for prevention of blood loss during surgeries, and rise in number of people suffering from chronic wounds and ulcers due to various diseases such as diabetes and CVDs primarily drive the market growth. In addition, technological advancements in wound healing procedures adopted by hospitals and clinics are further expected to boost the market growth.
