The report also includes competitor and regional analysis, and contemporary advancements in the global market.

Crop Protection Chemicals Market Report

The global crop protection chemicals market reached a value of US\$ 83.9 Billion in 2021. Looking forward, IMARC Group expects the market to reach US\$ 111.4 Billion by 2027, exhibiting at a CAGR of 4.34% during 2022-2027. Crop protection is the practice of managing and minimizing diseases, weeds and pest invasions that damage agricultural crops. Crop production primarily includes chemicals that help maintain high-quality grain and forage. They are classified into herbicides, insecticides, and fungicides. Crop insecticides reduce yield losses caused by pests and diseases, herbicides inhibit unwanted weeds' growth, and fungicides prevent fungal action on the crops.

We are regularly tracking the direct effect of COVID-19 on the market, along with the indirect influence of associated industries. These observations will be integrated into the report.

Crop Protection Chemicals Market Trends:

The global crop protection market is primarily driven by the continuous rise in the population index and the limited availability of cultivable land. The low food security for the masses is driving the need to increase food production across the world, which in turn, is driving the uptake of crop protection products worldwide. Furthermore, the expanding crop supplier and manufacturing base networks, the awareness regarding safe farming practices, and extensive research and development (R&D) activities conducted by key players are also providing a boost to the market growth across the globe.
