Key Trends In The Global Wood Processing Market

The increasing demand for supply chain transparency and stringent government regulations on the wood industry has led to the implementation of tracking and tracing technologies. Many wood companies are implementing their own tracking systems to maintain transparency in their timber supply chain. Electronic tracking is being adopted by wood companies and government agencies over paper-based systems and technologies such as radio-frequency identification chips, barcodes and advanced traceability software are being used.

The wood processing market consists of sales of processed wood by entities (organizations, sole traders and partnerships) that saw dimension lumber, boards, beams, timbers, poles, ties, shingles, shakes, siding, and wood chips from logs or bolts. This industry also includes establishments that treat planed, sawed and shaped wood with creosote or other preservatives such as alkaline copper quat, copper azole, and sodium borates, to prevent decay and to protect against fire and insects.
