Global warming and emission of the greenhouse gasses are considered to be the major challenge for the growth of the AC market during the forecast period 2021-2027.

Chlorofluorocarbons (CFCs) is the greenhouse gas, which is responsible for depletion of the ozone layer and this gas is significantly emitted through the refrigerators and air conditioners.

Growing electrification and rapid expansion of the retail sector in the rural market has been further spurring the growth of the global product market. For instance, according to Consumer Electronics and Appliances Manufacturers Association, rural markets are expected to grow at a compound annual growth rate (CAGR) of 25%, which is majorly attributed to increasing electrification of rural areas.

Based on end user, the residential segment held largest market share with nearly three-fifths of the global white goods market in 2019, and is anticipated to maintain its dominance till 2027. Growing disposable income and increase in spending on home improvement drive the growth of the segment. At the same time, the commercial segment would showcase the fastest CAGR of 8.5% during the forecast period. Rise in hotel & restaurants, hospital & clinics, commercial complexes and government offices drive the growth of the segment.

Based on product, the refrigerator segment accounted for nearly two-fifths of the global white goods market share in 2019, and is projected to lead the trail by 2027. Growing investments in innovation of refrigerators units and rising income levels coupled with reduced product prices with high specifications availability drive the growth of the segment. On the other hand, the dishwasher segment is expected to portray the fastest CAGR of 10.3% throughout the forecast period. The rising number of working population and nuclear families is fueling product demand. Also, the growing adoption of the product in both residential and commercial sectors to save the time, water, and energy for utensils cleaning further drives the growth of the segment.
