

Embedded Computing Market To Grow Faster According New Research Report By 2030

The demand for embedded computing system for industrial is projected to increase, which is anticipated to accelerate the market growth.

PORTLAND , PORTLAND, OR, UNITED STATE, August 8, 2022

/EINPresswire.com/ -- Technological advancements, reduction in prices of consumer electronics devices, and demand for innovative and high-quality embedded systems drive the growth of the global [embedded computing market](#).

Embedded Computing Market

However, fierce competition among regional market players and complex hardware configuration restrain the market growth. On the other hand, adoption of innovative technologies and rise in standards of living in emerging countries create new opportunities in the coming years.

According to the report published by Allied Market Research, the global embedded computing market generated \$36.74 billion in 2020, and is estimated to reach \$85.68 billion by 2030, witnessing a CAGR of 9.1% from 2021 to 2030.

Covid-19 Scenario:

• There has been a rapid surge in the demand for cloud-based embedded computing solutions to support the businesses processes during the Covid-19 pandemic. In addition, the pandemic led businesses around the globe to adopt the remote working culture, which in turn, surged the demand for embedded computing solutions.

- The embedded computing solution plays a crucial role in maintaining the business processes efficiently and keeping excellent connectivity between the connected devices. This was achieved through various features of embedded computing solutions including digital data exchange, remote access, and real-time data analytics.

The report offers detailed segmentation of the global embedded computing market based on type, end-users, and region.

Based on type, the hardware segment contributed to the highest market share in 2020, accounting for more than three-fourths of the total share, and is estimated to continue its lead position during the forecast period. However, the software segment is expected to manifest the largest CAGR of 12.5% from 2021 to 2030.

Based on end users, the communications segment accounted for the highest share in 2020, contributing to more than one-fourth of the total share of the global embedded computing industry, and is estimated to continue its leadership status during the forecast period. However, the automotive segment is projected to witness the largest CAGR of 12.9% from 2021 to 2030.

Based on region, Asia-Pacific, followed by North America, held the largest share in 2020, accounting for around one-third of the total market share, and is estimated to continue its dominance in terms of revenue by 2030. Moreover, this region is expected to portray the largest CAGR of 11.7% during the forecast period. The report also analyzes the regions including Europe and LAMEA.

Leading players of the global embedded computing market analyzed in the research include Arm Holdings Plc., Intel Corporation, Fujitsu Limited, Microchip Technology, Inc., IBM Corporation, Qualcomm Incorporated, Microsoft Corporation, STMicroelectronics, Renesas Electronics Corporation, and Texas Instruments Incorporated.

Key Benefits For Stakeholders:

- The study provides an in-depth analysis of the embedded computing market share along with the current trends and future estimations to elucidate the imminent investment pockets.
- Information about key drivers, restraints, and opportunities and their impact analysis on the embedded computing market size is provided.
- Porter's five forces analysis illustrates the potency of buyers and suppliers operating in the embedded computing market.

•The quantitative analysis of the embedded computing market share from 2020 to 2030 is provided to determine the embedded computing market potential.
