World Health Organization (WHO) projects that the global count of people aged above 65 years, will reach 2 billion by 2050. With the rising geriatric populations, due to several age related conditions, there will be more surgical procedures, which will increase the demand for hemostasis and tissue sealing agents. Hemostasis and tissue sealing agents are used to prevent hemorrhage. During a surgery it is very important to stop the excessive bleeding of the patient, to avoid further damage or death by blood loss. This has created the need for hemostasis and tissue sealing agents. The increasing number of surgeries, introduction of multi-usage and ready-to-use products along with the global rise in geriatric populations supplement the growth of the global hemostasis and tissue sealing agents market during the analysis period. Recently, the FDA has approved numerous hemostatic products that would further drive the growth of global hemostasis and tissue sealing agents market. Factors restraining the market growth are high prices of the products and stringent regulatory environment.
