The modified starch market consists of sales of modified starch by entities (organizations, sole traders, and partnerships) that refer to the starch extracted from grains and vegetables such as corn, waxy maize, tapioca, potato, or wheat, which has been treated to improve its ability to maintain the texture and structure of the food. Modified starch is used in food products that need to be cooked at high temperatures, microwaved, freeze-dried, or baked and fried so that the real texture of the food does not change during the cooking process.

## [Global Modified Starch Market Trends](#)

New product launches are shaping the modified starch market. Large players are launching new products to stay ahead in the competitive market and to increase market share.
