The aviation analytics market consists of sales of aviation analytics software and solutions by entities (organizations, sole traders, and partnerships) that refer to a computational technology that provides end-users with information or statistics derived from past airport operating data, historical flight data, weather predictions, and real-time flight data. It allows for predictive analysis and query processing of large amounts of structured and unstructured aviation data. Aviation analytics is staffed by specialists in the aviation sector with various expertise, including business process engineering, sales and marketing, and accounting.

[Global Aviation Analytics Market Trends](#)

Technological advancement is a key trend gaining popularity in the aviation analytics market. Airlines and airports are increasingly adopting new technology and turning to aviation analytics to automate operations, cut costs, and improve customer satisfaction.
