The district cooling market consists of sales of district cooling products by entities (organizations, sole traders, and partnerships) that are used to provide chilled water for indoor cooling purposes for industrial, commercial, and residential buildings. A district cooling system (DCS) is a system that distributes cooling capacity in the form of chilled water or another medium from a central source to many buildings via a network of subterranean pipes.

[Global District Cooling Market Trends](#)

Technological innovations are the key trend shaping the district cooling market outlook. According to the district cooling market overview, major companies are focused on introducing technological innovations to reinforce their position, which is predicted to be driving the district cooling industry growth. For instance, in August 2021, Keppel Corporation, a Singapore-based district cooling systems manufacturing company, launched Keppel DHCS based on thermal energy storage technology. It helps in the reduction of the district energy plant space and improves energy efficiency and energy-carrying capacity. These new district cooling systems have a cooling capacity of 14,000 refrigeration tons.

[Global District Cooling Market Segments](#)

The global district cooling market is segmented:

By Production Technique: Free Cooling, Absorption Cooling, Electric Chillers, Others

By Application: Commercial, Residential, Industrial

By Geography: The global district cooling market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa. Among these regions, the Middle East accounts for the largest share.
