The aquaculture market consists of sales of aquaculture products by entities (organizations, sole traders, and partnerships) that are used as a source of food and various commercial products. Aquaculture is a type of farming that involves the breeding, raising, and harvesting of aquatic organisms such as fish, algae, shellfish, and other organisms under controlled conditions. Aquatic species are a good source of protein, vitamins, minerals, fatty acids, and essential micronutrients. This contributes to habitat restoration, agricultural production, and the creation of aquariums for threatened species.

[Global Aquaculture Market Trends](#)

Technological advancements are a key trend gaining popularity in the aquaculture market. Major companies operating in the aquaculture market are focused on developing new technological solutions to strengthen their position. For instance, in October 2019, The Commonwealth Scientific and Industrial Research Organisation (CSIRO), an Australian government agency for scientific research, has developed a tool using augmented reality (AR) that uses novel pond and animal sensor technologies, data modeling, the next generation of data interaction techniques, situational awareness and decision support for immediate understanding of key water quality parameters such as pH, dissolved oxygen, and turbidity that farmers can use while managing

their ponds.

Global Aquaculture Market Segments

By Fish Type: Carps, Mollusks, Crustaceans, Mackerel, Sea Bream, Others
