Plastic wrap is a type of packaging that people use to store and transport items. It's usually constructed of recycled, Kraft, or parchment paper, and it goes through a variety of mechanical and chemical processes to achieve the desired weight and colour. Multiwall paper sacks, flat paper, and handled bags are some of the most common types of plastic wrap on the market. In contrast to plastic wraps, these wraps are recyclable, sturdy, lightweight, and highly customizable to meet customers' individual needs.

Recent Development

- In June 2020, Amcor partnered with Espoma Organic to innovate more ecological packaging and introduce a new bio-based polymer package. The polyethylene (PE) film consists 25% bio-based material.
- In September 2020, Amcor merged with Nestle to introduce recyclable flexible retort pouches in market that will improve the ecological footprint of customer packaging by up to 60%, starting with wet cat food. The new pouch meets the circular economy packaging guidelines, which the CEFLEX Consortium recently published.
