## Key Trends In The Processed Alumina And Aluminum Market

According to the processed alumina and aluminum industry analysis, aluminium manufacturers are using furnace insulators to minimize energy loss during the melting process. Furnace insulators are temperature resistant materials used for thermal insulation of furnaces. Advanced furnace insulators have temperature resistance of up to 1200°C with low shrinkage of less than 1% at 700°C. They also provide high resistance to thermal shock, abrasives, and chemicals. Recent tests have indicated that in terms of thermal conductivity, the advanced low bio-persistent fibre-based board furnace insulator performs better than calcium silicate by about 20% at 600°C and 15% at 800°C. Major companies offering furnace insulators include Morgan, Thermal Products Company, Nichias.
