From the name itself, it is clear that personalized orthopaedics is the provision of providing customized healthcare solutions. Personalised orthopaedics not just specializes in musculoskeletal system i.e. bones and muscle and joint conditions but also in orthopaedic medicine. Personalised orthopaedics approach relies upon scientific discoveries and understanding of genetic molecular profiles. Personalised orthopaedics approach is further based on digital manufacturing and 3D modelling and imaging.

Upsurge in the prevalence of osteoarthritis and other orthopaedic disease globally is one of the major factors fostering the growth of the market. Rising focus on the healthcare technological advancements coupled with ever-rising geriatric population is another market growth determinant. Rising research and development proficiencies, growing availability of customized orthopaedics implants, rising participation in sports and related activities and increasing personal disposable income will further generate lucrative market growth opportunities.

However, high costs associated with personalized therapeutics will derail the market growth rate. Dearth of skilled professionals and unfavourable reimbursement scenario in the developing and underdeveloped economies will further pose challenges for the market. Also, post-surgery infections will also hamper the market growth rate.

This personalized orthopedics market report provides details of new recent developments, trade regulations, import export analysis, production analysis, value chain optimization, market share, impact of domestic and localised market players, analyses opportunities in terms of emerging revenue pockets, changes in market regulations, strategic market growth analysis, market size, category market growths, application niches and dominance, product approvals, product launches, geographic expansions, technological innovations in the market.
