Collagen dressings are used to treat various types of wounds, including acute and chronic wounds, surgical wounds, and burns.

Improvements in technology; Investments and advances in R&D activities by manufacturers play an important role in innovation in treatments and therapies in healthcare facilities. Over the years, it has been observed that the stages of wound care such as inflammation, proliferation and maturation and its management are increasing rapidly. Techniques used in wound care management are advancing greatly, leading to new products to aid in skin healing and collagen dressings. As traditional dressing techniques are being modified and new alternatives are being used, the demand is increasing.

Animal-based collagen dressings have seen significant growth as well as the worldwide popularity of wound care dressings. The biological and functional properties of collagen products help to increase the demand for the product. There is increased use of collagen dressings, which are used for biological tissue matrix, including wound healing. These upgrades are combined with other advances in biomaterials science.
