Pneumonia is a lung infection that occurs in one or both the lungs caused by bacteria, virus, or fungi; however, bacterial pneumonia is the most common form occurring in adults.

Pneumonia results in inflammation in the air sacs (known as alveoli) of the lungs, which results in filling the alveoli with fluid (pus cells), thus causing breathing problems. Pneumococcal disease is common in young children, but older adults are at greatest risk of serious pneumococcal

infections and even death.

Pneumonia vaccines are primarily administered to children less than 2-years old and adults aged 65 years and older. This vaccine helps individuals provide immunization against 13 types of pneumococcal bacteria that causes infection in the lungs.
