Psychedelic medication is used to improve or alter sensory impressions, energy levels, cognitive processes, and spiritual experiences. Dissociative drugs (such as phencyclidine), empathogens, and serotonergic drugs (such as lysergic acid diethylamide) are the three types of psychedelic drugs. These medications are used to treat a variety of conditions, including major depressive disorder, treatment-resistant depression, panic disorder, post-traumatic stress disorder, and opiate addiction.

The market for psychedelic drugs has witnessed significant growth, owing to introduction of novel psychedelic drugs in recent years. In addition, increase in acceptance of psychedelic medications for treating depression is driving the market growth, since the medications have repeatedly demonstrated their high rates of effectiveness in the treatment of nicotine addiction, alcohol addiction, and anxiety-related terminal illness.

Increase in prevalence of depression and other mental disorders worldwide, rise in demand for
