According to the latest research by InsightAce Analytic, the global [Beauty Ingestible](#) market is valued at US\$ 3.29 billion in 2021, and it is expected to reach US\$ 8.30 Billion by 2030, with a CAGR of 11% during a forecast period of 2022-2030.

Easy-to-absorb beauty supplements provide all the

necessary ingredients. The premise that "you are what you eat" serves as the foundation for the concept of ingestible beauty. It involves eating and consuming more suitable nutrients, such as proteins, vitamins, minerals, and oils, to enhance your skin's health and appearance. These

vitamin supplements for beauty encourage healthier skin, nails, and hair as well as overall wellness by addressing vitamin deficiencies as well as exterior problems like acne and ageing. They can be modified to meet your exercise requirements and lifestyle.

The lack of collagen, the high prevalence of skin and lifestyle diseases, changing lifestyles and increasing health awareness, changes in routines and product preferences,

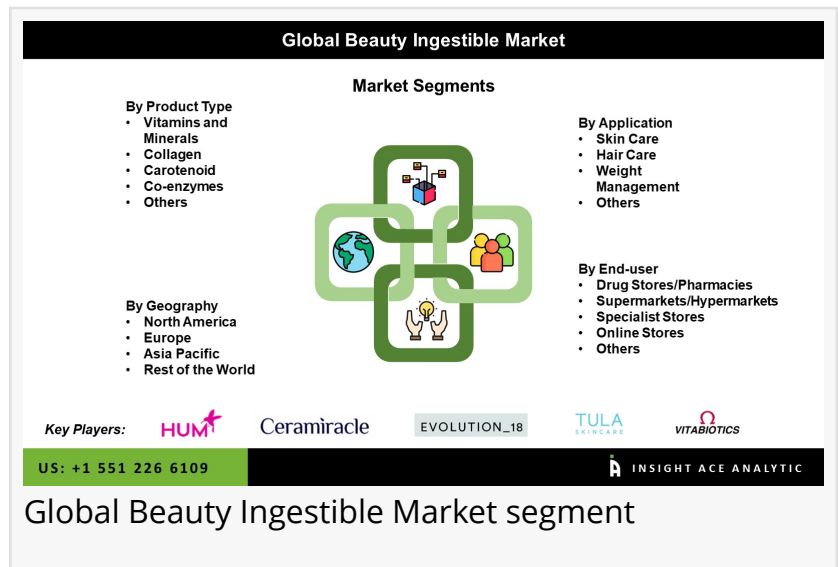

changes in patterns and product preferences, technological advancements in the beauty industries, and an increasingly health-conscious public are among the factors expected to drive market growth. Additionally, it is anticipated that there will be an increase in R&D initiatives to develop natural and herbal skincare products, as well as a rise in the availability of specialized nutritional beauty supplements throughout the anticipated time frame. The Covid-19 epidemic is now advantageous for the ingestible beauty industry. The demand for clean and natural label products has been spurred by consumers' growing knowledge of personal care issues and their understanding of the relationship between nutrition and appearance, which is projected to stimulate market growth potential in the years to come. Although these products have few side effects and are pricey, the market growth may be hampered throughout the projection period by these factors.

North America is anticipated to be the major contributor to the Beauty Ingestible market over the forecast years. It is projected that factors like rising healthcare spending, increasing public awareness of health and beauty issues, and consumers' strong preference for natural skin care products will support market growth. In addition, the Asia Pacific Beauty Ingestible market is expected to grow significantly during the forecast period due to the high frequency of hair and skin issues, the developed healthcare system, and the growing number of health-conscious consumers. Following Covid-19, the beauty industries in China and Japan have made significant efforts to introduce fresh, natural, and safe cosmetics.

Major market players operating in the Beauty Ingestible market include EVOLUTION\_18, The Nue Co., Tula Skincare, HUM Nutrition Inc., Ritual, The Detox Market, Vital Proteins LLC, Wellpath, Ceramiracle, Apothékary LLC, Wholy Dose, BEND BEAUTY, The Beauty Chef, ProPlenish, Nature's Bounty, Inc. and Other Prominent Players.

Recent collaborations and agreements in the market:

- In September 2021, The health firm EVOLUTION 18 introduced Beauty Bites, functional gourmet chocolates made by Brooklyn-born chocolatiers and packed with biotin, collagen, and

hyaluronic acid to improve skin, hair, and nails (U.S.). Two types are offered: milk chocolate peanut butter and dark chocolate peanut butter crunch are available.

- In August 2021, WelleCo, a company that produces cosmetic ingestibles, has just released the Skin Elixir, their newest product, in capsule form. The 60 non-GMO, vegan, gluten-free, and dairy-free capsules that make up The Skin Elixir were made in Australia. The bioavailable capsules contain skin-nourishing super greens, vitamins, and antioxidants.
- In June 2021, the improved skin, hair, and nail jelly beans from Nature's Bounty (U.S.) had twice as much biotin and contained keratin as the previous batch. The jelly beans are produced using a non-GMO recipe that is free of lactose, soy, and artificial flavours and sweeteners.
