Company's "White Cement Global
Market Report 2022", the [white cement](#)

[market](#) size is expected to grow from \$5.87 billion in 2021 to \$6.43 billion in 2022 at a compound annual growth rate (CAGR) of 9.5%. The white cement industry growth is mainly due to the companies rearranging their operations and recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The white cement market is expected to reach \$7.98 billion in 2026 at a CAGR of 5.6%. According to the white cement market analysis, rising residential construction projects are contributing to the growth of the market.

Key Trends In The White Cement Market

Technological advancement is a key trend gaining popularity in the white cement market. Companies in the white cement market are increasingly focusing on new technologies such as carbon capture, utilization, and storage (CCUS) for more efficient and sustainable cement forms. For instance, in June 2021, Carbicrete, a Canada-based carbon removal technology company is using captured carbon dioxide for accelerating the curing process of concrete while strengthening and sequestering the gas. The technology cuts out the need for calcium-based cement, a key ingredient in traditional concrete, which is a significant contributor to global CO2 emissions.

Overview Of The White Cement Market

The white cement market consists of sales of white cement by entities (organizations, sole

traders, and partnerships) that produce concrete that is perfectly colored and consistent throughout. White cement is a Portland cement prepared from raw materials that are low in iron compounds, which give traditional Portland cement its grey color.
