

World's First AI Writing Assistant Powered by GPT-3 Launches in the App Store

The Ideal Tool for Back-to-School

TORONTO, ONTARIO, CANADA, August 24, 2022 /EINPresswire.com/ --

[ParagraphAI Inc.](#), a leading developer

of advanced AI-powered productivity tools, today announced the release of their natural language processing ("NLP") AI Writing Assistant. With internet access, ParagraphAI instantly drafts original and accurate paragraphs of text on any topic with proper grammar and tone

“

By collaborating with AI a writer becomes more like an editor, reviewing the AI-generated text and fine-tuning its message.”

Shail Silver, Co-Founder and Executive Chair at ParagraphAI

correction. The productivity tool is now available to download for free in [Google's Chrome Web Store](#) and is the first AI Writing Assistant powered by GPT-3 to launch in [Apple's App Store](#).

ParagraphAI can generate essays, articles, emails, messages and more with perfect spelling, grammar, tone and vocabulary. Its release comes just in time for the back-to-school season with an NLP model and integration that generates 99% original plagiarism-free drafts. Still, in order to get the best results from ParagraphAI, they recommend

that users incorporate their own edits and perform both plagiarism checks and fact checks once the text has been generated. ParagraphAI currently offers an indefinite “Free Forever” plan that enables users to write 20 paragraphs a day for personal use, with no credit card required. There are also a variety of affordable payment plans—including a student discount—for those wishing for a more robust service.

Shail Silver, the company's Co-founder and Executive Chair, put the tool's efficiency into perspective: "On average, it takes around 50 minutes to handwrite 1,000 words. Typing gets that down to 25 minutes. ParagraphAI can write 1,000 original words in seconds – by collaborating with AI a writer becomes more like an editor, reviewing the AI-generated text and fine-tuning their message." By achieving this extraordinary efficiency without sacrificing quality, ParagraphAI is poised to change the way we think about writing.

Built on top of GPT-3 technology from OpenAI, an AI research lab co-founded by Elon Musk, ParagraphAI is one of the most powerful AI productivity tools on the market for both students

and professionals. ParagraphAI prioritizes the end-user experience, and it has been designed with dyslexic and visually impaired users in mind. Requiring no additional software, ParagraphAI is accessible to users of all comfort levels and is easy to integrate into pre-existing routines.

"Our mission is to ethically and productively make AI accessible to everyone," said Kevin Frans, a graduate student of AI at M.I.T. and Co-Founder/CTO of ParagraphAI.
