

Helicopters Market Size, Outlook, Analysis Report, Regional Outlook With Forecast 2021-2031

PORTLAND, ORAGON, UNITED STATES, August 23, 2022 /EINPresswire.com/ -- A [helicopter](#) is a type of aircraft that has one or more power-driven longitudinal blades or rotors that allow it to move in any direction, land & take off vertically, or remain stationary in the air. It is the most appropriate type of flight, as it prevents vast landing grounds situated far from downtown areas and the necessary intervening means of transportation such as automobile, bus, and subway that conventional aircraft normally necessitates. In addition, the helicopter's ability to take off and land vertically, the aircraft's handling properties under low airspeed conditions, and hovering for extended periods of time have proven advantageous for performing tasks that were not possible with other aircraft.

Helicopter emergency medical services (HEMS) involves a highly trained team of critical care and

emergency medical doctors and paramedics who are flown by helicopter to critically ill patients to save their lives, stabilize them, and then transport them to a major hospital for further treatment. This intervention aids patients in receiving first aid and surviving the journey to the hospital; hence, its penetration has been witnessed to increase considerably. In addition, HEMS is a service that has proven to be the key factor in reducing the rate of avoidable deaths in developed countries during road traffic accidents and catastrophic disasters. Moreover, it is the most advanced type of pre-hospital emergency medicine service, pre-hospital care, and immediate care, and is an essential component of medical care in developed and developing countries due to the increasing number of patients suffering from cardiovascular and other diseases. Many nations started implementing and funding HEMS services. For instance, in March 2022, Airbus signed a Memorandum of Understanding (MoU) with Airlift Global, a company backed by the UK-based AUM Capital to foster HEMS and associated air medical services in India. Thus, increase in use of helicopters in emergency medical services is anticipated to offer remunerative opportunities for the growth of the global helicopter market during the forecast period.
