

# Antiseptics and Disinfectants Market Size, Share, Trends & Growth Forecast To 2027

HYDERABAD, TELANGAANA, INDIA,  
August 23, 2022 /EINPresswire.com/ --

As per the report published by MarketDataForecast, the antiseptics and disinfectants market worldwide is expected to grow with a CAGR of 6.77% from 2022 to 2027, the market size is estimated to reach 10.52 billion USD by 2027 from USD 7.58 billion in 2022.

Both antiseptics and disinfectants are used to prevent and treat infections. They kill microorganisms such as bacteria, viruses, and fungi using some chemicals known as biocides.

Antiseptics kill microorganisms on your skin. Antiseptics are used more in health care to kill or stop the growth of microbes on the skin and mucous membranes. They also clean hands and treat minor wounds in large and small environments. Before performing medical operations like blood sampling and surgery, healthcare workers commonly use antiseptics. Germs on surfaces and equipment are killed with disinfectants. For cleaning floors, kitchens, and bathrooms in homes, disinfectants are frequently used. They occur, in several groups, including detergents, acids, oxidizing agents, alcohols, biguanides, halogens, phenols, and quaternary ammonium compounds.

What is the impact of COVID-19 on the global antiseptics and disinfectants market?

The use of antiseptics and disinfectants increased in 2020 in many places due to reducing the viral spread during the Coronavirus Disease 2019 (COVID-19) pandemic. Coronavirus can live for hours or days on certain metal surfaces. To eliminate harmful organisms, disinfectants are typically used. During this pandemic, we use these antiseptics and disinfectants more in hospitals, schools, public areas, and homes. In addition, the U.S. Environmental Protection Agency (EPA) approved the use of 3M's T.B. Quat Disinfectant Ready-to-Use Cleaner in 2020 for claims of killing COVID-19's primary virus SARS-CoV-2. With a 60-second contact time on hard, non-porous surfaces, Ready-to-Use Cleaner showed the disinfectant's effectiveness against the

virus. Even though there are some effects of more antiseptics and disinfectants, guidelines should give on their usage for better results. Considering all these factors, the market has had a positive impact on the growth during the pandemic.

#### MARKET DYNAMICS:

One of the primary drives for market growth is using antiseptics and disinfectants in hospitals. Antiseptics and disinfectants are used in hospitals and other healthcare settings for various purposes. They are essential in infection control procedures and help avoid nosocomial infections. For example, antiseptic is used for Hand washing, cleaning skin before an operation, and treating skin infections in hospitals. In addition to hand hygiene and proper medical device reprocessing, washing and disinfecting surfaces in hospitals is becoming more and more critical to preventing disease.

Increasing awareness about hygiene is another factor that drives the market forward. Due to the increase in coronavirus infection, most people care about house hygiene to reduce the virus spread. For example, utilizing a household cleaner with soap or detergent minimizes the number of germs on surfaces and lowers the risk of infection from surfaces. In 2021, Health Canada recently announced the SC Johnson home cleaning products as effective disinfectants against SARS-CoV-2, the virus that causes COVID-19.

#### ANALYSIS OF VARIOUS SEGMENTS INVOLVED IN THE ANTISEPTICS AND DISINFECTANTS MARKET:

Based on the type, the quaternary ammonium compounds segment has the highest market share. By alkylating tertiary amines with halocarbon, quaternary ammonium compounds are created. For example, more than 200 disinfectants that the U.S. EPA presently recommends being used to inactivate the SARS-CoV-2 (COVID-19) virus contain quaternary ammonium compounds (QACs) as active ingredients. The amounts of these compounds used in the household, workplace, and industry settings have likely increased, and usage will continue to be elevated given the scope of the pandemic.

Based on the end-user, the domestic user segment has the highest market share. Depending on the concentration, household bleach can be used as a disinfectant or sanitizer. It is active against most microorganisms, including bacterial spores. Disinfectants are also used in the house for routine cleaning to remove dirt. In addition, some antiseptics are used to treat mouth infections.

## GEOGRAPHICAL ANALYSIS:

North America had the highest share of the global antiseptics and disinfectants market in 2021 due to increasing awareness among people, an increasing number of surgeries in hospitals, an increasing incidence of food poisoning, and rising hospital-acquired infections. According to the U.S. Centre for Disease Control and Prevention, more than 98,000 individuals die from HCAs each year because of these infections, which affect nearly 1.7 million hospitalized patients.

Asia Pacific region is expected to have the fastest CAGR among all the regions during the forecast period due to increasing cases of hospital-acquired infections, high literacy rates, and an increasing number of healthcare centers. In addition, the general disinfection of surfaces is a part of a long-running campaign in China to combat a Covid-19 transmission risk and maintain disinfection of specific surfaces, like those in busy public areas and where food is handled, or Covid-19 patients are treated.

Europe has had moderate growth during the pandemic. However, according to the German Federal Statistical Office, in 2020, the coronavirus pandemic has raised the demand for disinfectants. Launching new technologies for disinfecting purposes and increasing awareness is the factor driving the market in Europe. Antiseptics and disinfectant manufacturing companies use unique and new technologies to design, produce, and sell products.

## KEY MARKET PLAYERS IN THE ANTISEPTICS AND DISINFECTANTS MARKET:

- 3M Company
- Abc Compounding
- Advanced Sterilization Products
- American Biotech Labs
- Angelini Pharma Inc.
- Becton, Dickinson, And Company
- Bio-Cide International Inc.
- Cardinal Health
- Nufarm Limited
- Carefusion Corp.
