Cleanroom Gloves Market Overview and Scope:

Cleanroom gloves are mainly intended to be used in cleanrooms and controlled environments. Cleanroom gloves are used to protect products and therapeutics from contamination. Cleanroom gloves are developed to prevent particulate contamination, meet stringent industry standards and requirements. Depending upon working conditions cleanroom gloves are even available as sterile and non-sterile. Cleanroom gloves are washed in pure deionized water to remove the particulates and ions and are chlorinated from both sides i.e. from outside as well as inside. The contamination of cleanroom is measured by the number of particles by volume of air

at a specific particle size.

The primary industries involved in cleanroom gloves are Life Science, Chemical, and Healthcare. Cleanrooms are allotted class from 1 to 100,000 with particle size of $\geq 0.1\mu\text{m}$ to $5\mu\text{m}$ with assigned ISO equivalent. The first cleanroom standard was set by United State Federal Standard 209 is Airborne Particulate Cleanliness Classes in Cleanrooms (USFED STD 209E). Measurement of airborne contaminates is calculated as maximum particles per cubic foot. For example, 'Class 10' means not more than 10 particles/ft³. The U.S. Department of Commerce introduced a new classification in 1999 called International Organization for Standardization ISO. The certification requirements for air cleanliness areas, and airborne particulates were estimated by this document. The new standard officially replaced with the old Federal Standard 209-e in 2001, both classification terms are still in use.
