The global e-health market was valued at \$74,476 million in 2019, and is projected to reach \$2,30,640 million by 2027 at a CAGR of 14.5% from 2020 to 2027. E-health is the delivery of healthcare using modern electronic information and communication technologies when healthcare providers and patients are not directly in contact and their interaction is mediated by electronic means. Among other things, the services that are thus provided include physical and psychological diagnosis and treatment, telepathology, vital signs monitoring, electronic prescribing, teleconsultation, and others. Furthermore, automated and interoperable healthcare information systems improve medical care, minimize healthcare costs, reduce manual errors, and enhance patient satisfaction, while optimizing reimbursement for ambulatory and inpatient healthcare providers.

Impact Analysis – E-health Market Research

Analysts at Allied Market Research constantly monitor the E-health industry factors with impacts of current events; with this study an update of how industry players have tackled latest scenario and what key strategies have made significant difference is showcased.

Key Highlights from E-health Market Study.
