

Highlights from the Construction Links Network platform this week - September 1, 2022

Peer-to-peer content sharing for the construction, building and design community

SUNDRE, ALBERTA, CANADA,
September 1, 2022 /EINPresswire.com/
-- [Construction Links Network](#) is the industry's ONLY peer-to-peer content sharing platform for the construction, building and design community in Canada.

Top news this week comes from IDTechEx Ltd. who recently released their Electric Vehicles in Construction 2022-2042 report. Many major construction firms are now publishing both medium-term and long-term targets to reduce their contribution to greenhouse gas emissions. With increasing scrutiny of the

environmental impact of current building practices, the electrification of mobile construction machinery offers construction companies a relatively near-term opportunity to demonstrate their environmental credentials. Investment in zero-emission construction machines, replacing fossil fuel-powered excavators, loaders, and cranes, will be critical to every construction company's effort to reduce their emissions.

The top video is courtesy of Natural Resources Canada who go through a series of steps and explore various scenarios on how to find a specific mass timber project or manufacturer within Canada.
