The cloud management platform market consists of sales of cloud management platforms and related services by entities (organizations, sole traders, and partnerships) that refers to integrated software management tools used to implement and monitor public, private, and hybrid cloud environments. It combines a set of features or modules that enable the management to work in different virtual cloud environments. The platform's purpose is to assist IT teams with the security and optimization of cloud infrastructure, including the applications and data. It aims to improve the management of cloud settings, cost and performance optimization, and security enhancement.

[Global Cloud Management Platform Market Trends](#)

The use of a multi-cloud management platform is a key trend in the cloud management platform market. It is a set of services that work together to address the issues associated with multi-cloud deployments for simplified hybrid IT management. The multi-cloud management platform includes application identification and dependency mapping; migration planning; capacity

optimization; cloud cost control; cloud security automation; increased performance and availability; and intelligent IT service management. These functionalities ease the workflow process and decrease the operational cost for the company. For instance, in October 2020, Oracle, a US-based computer software company, launched a multi-cloud observability and management platform. This combines a comprehensive set of management, diagnostic, and analytics services to assist customers in removing the complexity, risk, and cost associated with a fragmented approach to managing multi-cloud.

Global Cloud Management Platform Market Segments

The global cloud management platform market is segmented:

By Component: IT Operations Management (ITOM), IT Service Management (ITSM), IT Automation and Configuration Management (ITACM)

By Deployment Mode: Private Cloud, Public Cloud, Hybrid
