Food waste is the type of food which is either liquid or solid that is uneaten or abandoned. Food

waste management is a process in which all the activities and actions are taken to take this waste from commencement to their final clearance. Collection, treatment, disposable are some of the important steps in the food waste management.

Rising growth in the food industry is a vital factor escalating the market growth, also increasing rapid urbanization and industrialization in developing countries, rising usage of the organic waste for the production of animal feed and fertilizer, rising consumer preference for new types of food and exotic food items, including tropical fruits, premium coffee, and imported products, rising trade of food and food ingredients between various countries has led to the development of new supply chains, which in turn increases the food waste and rising stringent regulations by the government and food management bodies are the major factors among others driving the food waste management market briskly. Moreover, rising research and development activities and increasing modernization in the new products offered in the market will further create new opportunities for the food waste management market in the forecast period of 2021- 2028.
