The global neonatal ventilator market was valued at $328.65 million in 2019, and is projected to reach $555.80 million by 2027, registering a CAGR of 6.7% from 2020 to 2027. The neonatal ventilator is medical device that aid in offering proper ventilation to the premature & newborns infants. The neonatal ventilator helps neonates to breathe through artificial breathing mechanisms. The ventilator assists in breathing by placing a tube called endotracheal tube in the patient’s windpipe. These neonatal ventilators promote alveolar gas exchange such as oxygenation and carbon dioxide (CO_2) elimination by producing positive pressure to inflate the lungs of a neonate, who is incapable of adequate independent breathing. Moreover, these ventilators support preterm and critically ill neonates who suffer from respiratory failure or disorders and who generally have high airway resistance, small tidal volumes, and high respiratory rates.
