

Highlights from the Construction Links Network platform this week - September 8, 2022

Peer-to-peer content sharing for the construction, building and design community

SUNDRE, ALBERTA, CANADA,
September 8, 2022 /EINPresswire.com/
-- [Construction Links Network](#) is the industry's ONLY peer-to-peer content sharing platform for the construction, building and design community in Canada.

This network includes thousands of Canadian construction managers, contractors, developers, building managers, property managers, architects, designers, engineers, government officials and more. Members use this platform to share and onboard their digital content on the Internet, through social media and our popular e-Newsletters. Ideal for product / service releases, company announcements, blogs, podcasts, webinars, case studies, videos and more.

Top news this week is courtesy of Fast Company who bring us a news story that solves two problems with one unique solution. Each day, about 54,000 tonnes of PPE waste travels to landfills, often winding up in the ocean. Researchers at the Royal Melbourne Institute of Technology in Australia have spent more than a year testing the possibility of reusing PPE—in concrete. The building material is versatile, but it has poor tensile strength, meaning it can break easily under tension. Reinforcing concrete makes it more durable and more flexible, which the scientists found they could achieve using the plastic in PPE. Nitrile gloves are made of a synthetic rubber polymer; masks contain polypropylene fibers; and gowns have a blend of polyethylene and polypropylene, both plastic polymers. All three successfully strengthened concrete in

testing.

The top video is courtesy of TechFreeze who give us a unique look at home upgrade ideas to create hidden spaces. Safety is the most important thing for us and our families. One of the best ways to achieve this is to have secret spaces in our homes.

More content shares from members include:
