Drones are unmanned aerial vehicles (UAE) that comprise the power of robotics and digitization for collecting data during aerial surveys and inspections. They follow set routes and commands transmitted by the users or onboard computers. At present, they are widely deployed in business settings that require both mobility and high-quality data, ranging from broad capital projects to infrastructure maintenance. Additionally, several companies are developing apps that manage, integrate, and provide data collected by drone-powered business solutions in an easy-to-use web browser interface. Furthermore, they aid start-up companies and government authorities in strategic advisory, including reports and technical products.
