The two original titles being previewed at the show – Robot Rejects and System Restore – are being developed and published in-house, and show off the technical prowess and range of genres the studio is capable of. The games are sure to strike a chord with fans at the event with polished mechanics, satisfying gameplay, and distinct visual style.

The game features an impressive level of customization for bots, challenging players to innovate and experiment with robot type, body shape, and weapon types to create the perfect conductor for a symphony of robot destruction. The game will feature one

vs. one, team matches, and online tournaments, with more game modes to be announced.

## Features

Players earn new upgrades for their agent as they climb through different layers of the source code and uncover its mysteries, defeat bosses and search out the Master of the infection in order to restore the system.

Digital Will has shared that the single player campaign will be the primary focus, but is testing out some ideas for local and online multiplayer. System Restore features fast-paced run-and-gun combat clothed in a tron-like aesthetic bursting with vibrant neon colors. The combat offers tremendous depth, with a wide array of weapon types that appear randomly, forcing the player to master different styles of combat against a vast array of different viral enemies.
