Key Trends In The Securities Brokerage and Stock Exchange Services Market
Securities brokerage companies are extensively using artificial intelligence for faster trade executions. Artificial Intelligence refers to programming machines to enable them to work and react like humans. Most of the companies are using AI for algorithmic trading in stock brokerage. Algorithmic trading refers to turning a trading idea into an algorithmic trading strategy using an algorithm. The AI-enabled alternative trading system (ATS) helps in improving the speed of trade execution.

Overview Of The Securities Brokerage and Stock Exchange Services Market
The securities brokerage and stock exchange services market consists of sales of securities brokerage and stock exchange services by entities (organizations, sole traders, and partnerships) that act as brokers in selling securities such as equities, bonds, commodities, and derivatives.

Securities brokerages represent customers in dealing with securities transactions on the trading floor/online platform of stock exchanges. The securities brokerages might sometimes act as a representative for both buyer and seller. This market excludes the advisory and investment activities of brokerage firms. This market includes transaction charges levied by stock exchanges for trading on its trading floor/online platform to securities brokerages and other fees. It does not include the value of the funds invested in securities.
