A wireless slate is a peripheral device that educators can use to present content on interactive whiteboards (IWBs) or projector screens from anywhere in the classroom. It can be operated within a maximum range of 50 meters, thus allowing the user to use these devices anywhere in the school. It has a touch-sensitive surface to control IWBs and an attached stylus pen that enables users to access files, write in digital ink and operate on-screen learning applications from anywhere in the room. It is primarily used as computer control peripherals similar to a mouse or keyboard.
