Market Outline: -

A dental laboratory primary role is to provide restorative dentistry is to perfectly copy all of the

functional and aesthetic parameters that have been defined by the dentist into a restorative solution. Throughout the entire restorative process, from the initial patient consultation, diagnosis, and treatment planning to final restoration placement, the communication routes between the dentist and the laboratory technician now can provide a complete transfer of information. Functional components, occlusal parameters, phonetics, and aesthetic requirements are just some of the essential types of information that are necessary for technicians to complete the fabrication of successful, functional, and aesthetic restorations. Today, as in the past, the communication tools between the dentist and the technician include photography, written documentation, and impressions of the patient's existing dentition.

The equipment in the dental laboratory includes the full range of systems used for manufacturing fixed or removable dental prosthetics. The dental laboratory technician's task is to fabricate crowns, bridges, dentures, and orthodontic appliances based on the prescription of a dentist. Many of these tasks require high precision, and the technician's skill weighs heavily on the ultimate success of the treatment. Laboratory technicians are trained on the job or in formal education programs.
