Healthcare information software (HIS) refer to solutions that are generally utilized by healthcare professionals for organizing and processing medical data. They are primarily designed for the collection, management, storage, and transmission of patient health data. Some of the commonly available HIS software include practice management applications, master patient

index (MPI), clinical decision supports (CDS), remote patient monitoring (RPM) systems, etc. Healthcare information software helps in minimizing operating errors, improving efficiency, reducing cost, etc. As a result, they find extensive applications in hospitals, medical research centers, clinics, etc.

Note: Our analysts are continuously monitoring the influence of the COVID-19 pandemic on the market. This insightful information is included in the report to improve the efficiency, resilience and overall performance of businesses.

GCC Healthcare Information Software Industry Trends and Drivers:

The expanding geriatric population, who are generally more prone to chronic diseases, cardiovascular ailments, etc., is one of the primary factors driving the GCC healthcare information software market. Besides this, the growing utilization of teleconsultation services, owing to the sudden outbreak of the COVID-19 pandemic, is acting as another significant growth-inducing factor. In addition to this, the escalating investments by government bodies and private firms in upgrading the existing healthcare infrastructures through the integration of advanced systems are further propelling the product demand. Moreover, various technological innovations in healthcare information software, including automated quality control, are also catalyzing the market growth. Several other factors, such as the widespread adoption of digitalization, continuous improvements in the IT sector, etc., are expected to augment the GCC healthcare information software market over the forecasted period.
