EINPresswire.com/ -- The [SDHI Fungicide market report](#) provides a detailed analysis of global market size, regional and country-level market size, segmentation market growth, market share, competitive landscape, sales analysis, the impact of domestic and global market players, value chain optimization, trade regulations, recent developments, opportunities analysis, strategic market growth analysis, product launches, area marketplace expanding, and technological innovations.

Succinate dehydrogenase inhibitor (SDHI) fungicides are increasingly used in agriculture to combat molds and fungi, two significant threats to both food supply and public health.

SDHI fungicides belong to FRAC group 7, which has been on the market since the late 1960s. FRAC group 7 fungicides used to control essential vegetable diseases include flutolanil (year introduced, 1986), boscalid (2003), penthiopyrad (2008), fluxapyroxad (2011), fluopyram (2013), and pydiflumetofen (2016).

Major market player BASF launched Flowable, its innovative new fungicide for field crops. Imtrex Flowable is a fungicide belonging to the SDHI family and contains Xemium, an innovative active ingredient developed by BASF. With almost no SDHI fungicides on the market to control wheat rust, Imtrex Flowable provides growers in Hokkaido with a valuable new means of controlling outbreaks of resistant crop diseases.
