The injectable insulin drugs market consists of manufacturers' sales of insulin drugs and types of Insulin by entities (organizations, sole traders and partnerships) which are used to treat diabetes. Insulin is a medication prescribed to treat type 1 diabetes and type 2 diabetes mellitus. There are several types, preparations, and dosage amount of insulin. Insulin is a hormone that is produced naturally in our bodies. Its main role is to allow cells throughout the body to uptake glucose (sugar) and convert it into a form that can be used by these cells for energy. The market covered in this report does not include non-insulin drugs and other antidiabetic drugs or medicine.

Global [Insulin Drugs Market Trends](#)

There is an increased trend of mergers and acquisitions for the new formulations in Insulin market and the companies are investing in development of new medicines in Insulin drugs market. For example, researchers at Lund University Diabetes Centre in Sweden, worked on CRISPR, a genome modification tool. This resulted in turning off of one of the genes which was responsible for causing diabetes. This effectively decreased beta cell death and increased insulin production in the pancreas. Insulin maker, Novo Nordisk has developed a diabetes pill and planned to launch it in India by February 2022. This pill belongs to a blockbuster class of drugs, glucagon like peptide-1 (GLP-1s) that stimulate insulin production. The new drug is expected to

generate about \$5 billion in annual sales.
