The anti-viral drug therapy market consists of sales of anti-viral drugs used for the treatment of viral infections, such as human immunodeficiency virus (HIV), hepatitis, influenza and novel coronavirus. Antiviral drugs do not kill their target pathogen, instead they inhibit the development of those viruses. The anti-viral drugs establishments are primarily engaged in the manufacturing of DNA polymerase inhibitors, reverse transcriptase inhibitors, protease inhibitors, neuraminidase inhibitors, and others

Global Antivirals Market Trends

Companies in the anti-viral drug therapy market are continuously innovating through technological advancements to develop drugs to treat different viral infections.

Biopharmaceutical companies are developing vaccines for the treatment of novel coronavirus. Technological advances in the pharmaceutical sector include development of nucleic acid vaccines that are DNA- and RNA-based, and which enable the human body to produce vaccine antigen. In March 2020, Applied DNA Sciences' subsidiary LineaRx and Takis Biotech formed a joint venture to develop a linear DNA vaccine as a treatment for coronavirus. The JV will use Polymerase Chain Reaction (PCR)-based DNA manufacturing technology to develop the vaccine. Such initiatives and activities are projected to support market growth to a significant extent.

Global Antivirals Market Segments

By Drug Class: DNA Polymerase Inhibitors, Reverse Transcriptase Inhibitors, Protease Inhibitors, Neuraminidase Inhibitors, Others

By Application: HIV, Hepatitis, Herpes, Influenza, Others

By Type: Branded, Generic

By Geography: The global antiviral drug market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa. Among these regions, North America accounts for the largest share.
