Insurance is a contract type that is represented by a policy. In insurance, an individual or the

entity receives financial reimbursement or protection in case of a loss from the insurance company. Dental insurance is a form of health insurance that covers only the dental health or oral health of a person. This insurance reimburses any kind of dental costs incurred by the patients. The high cost of dental procedures, growing prevalence of dental problems globally, and increasing awareness about dental insurance are fueling the global dental insurance market growth.

Dental Insurance Market Size

The global dental insurance market is divided into insurance type, mode of distribution, and end-user. By insurance type, the dental insurance market is segmented into preventive, basic/minor, and major. The basic segment includes emergency care for pain relief, composite fillings (white fillings), re-cementing of dental crowns, amalgam fillings, sedative fillings, periodontal surgery, root canal treatment, periodontal scaling and root planning, routine tooth extractions, crowns, stainless steel (prefabricated), and non-routine x-rays. Thus, the basic/minor segment dominated the market in 2018, as it covers mostly both the important and common dental procedures.

Insurance Type

Based on the mode of distribution, the dental insurance market includes insurance agents, corporates, and online channel. The online channel is anticipated to show a high growth rate in the years ahead, owing to the increase in the use of the internet and electronic gadgets in every region. Corporates dominated the global dental insurance market in 2018, as dental insurances are generally directly provided in groups in offices. The high preference for providing corporate insurances that are directly purchased from companies will also fuel the growth of this segment.

Based on end-user, the dental insurance market includes individuals and families. Families dominated the market in 2018 and are also anticipated to show a higher growth rate over the forecast time period, due to the easy availability of family plans and lower costs of family plans as compared to the individual plans.

North America dominated the global dental insurance market in 2018, owing to the early introduction of highly developed dental surgical equipment, increase in regional healthcare spending, high costs of dental procedures, and the presence of the major market players. Asia Pacific is expected to show the highest CAGR in the dental insurance market globally in the future, due to the growing awareness about dental care procedures and the benefits of dental insurances and growing prevalence of oral health problems in developing countries like India.

The coronavirus pandemic's unpredictable nature has had a significant negative influence on the world market for dental insurance market. The supply chain for finished goods as well as the components of raw materials are both impacted by COVID-19. The dental insurance market is dominated by North America, followed by Europe and Asia Pacific, due to the concentration of several important firms operating in these regions. As a result, given that many major players in these regions serve end-users worldwide, the dental insurance market is anticipated to have

some supply-related problems. Regional consumption is projected to increase in the relevant market as consumers become more concerned with maintaining their weight and adopting different diets to keep healthy. Overall, this should lead to a rise in demand for dental insurance market.
