The shoulder fired weapons market consists of sales of shoulder-fired weapons by entities (organizations, sole traders, partnerships) that refer to a weapon that is shot while being held in the hands and having its butt pressed up against a shoulder.

[Global Shoulder Fired Weapons Market Trends](#)

The development of recoilless artillery is a key trend in the shoulder-fired weapons market. Recoilless weapons are direct-fire weapons differentiated by a method of operation in which propellant gases (or another counter-mass such as powder or liquid) are released from the back of the barrel to balance the recoil caused by the projectile's forward motion. This eliminates the bulky and inconvenient recoil-counteracting equipment of a typical cannon, allowing for a thinner-walled barrel. As a result, it is possible to launch a relatively large projectile from a platform that would otherwise be incapable of carrying the weight or recoil of a comparable-sized conventional cannon.
