Disposable incontinence products are used in management of urinary incontinence. Urinary Incontinence means losing control of bladder, due to which there is an involuntary leakage of

urine. In this condition, control over the urinary sphincter is weakened or completely lost and due to this, a person urinates even when they don't want to. This is a very common and often embarrassing problem for people. At the time of urination, muscles around urethra relax and let urine pass out of the body, however, in urinary incontinence, muscles around urethra don't work in the way they should, resulting in leak-out of urine.
