value of US\$ 161.83 Million in 2021. Looking forward, IMARC Group expects the market to reach a value of US\$ 240.56 Million by 2027, exhibiting a CAGR of 6.62% during 2022-2027.

Surrogacy is a method in which a surrogate bears and gives birth to a child on behalf of another person or couple. It is supported by a legal agreement and provides parenthood to individuals, members of the LGBT community, and those with infertility or other medical issues. It enables one or both parents to maintain a biological relationship with the child. Since the cases of infertility due to problems in egg or sperm production or reduced sperm count are increasing, surrogacy is gaining immense traction across the globe.

Global Surrogacy Market Trends and Drivers:

The global surrogacy market is primarily driven by the rising awareness about infertility treatments, such as sperm or egg donation and in-vitro fertilization (IVF). Additionally, numerous technological advancements in assisted reproductive technologies have catalyzed market growth. Moreover, there is a rise in the prevalence of polycystic ovarian syndrome (PCOS) in women due to stress, hormonal imbalance, decreased physical activity, and lifestyle changes, such as smoking, alcohol consumption, and surging intake of calorie-dense foods.

In line with this, the increasing number of fertility clinics is positively influencing the market growth. Besides this, the rising use of gestational surrogacy by surrogacy professionals, as it is less complicated than traditional surrogacy, is another major growth-inducing factor. Other factors, including the increasing fertility tourism, rising inability to conceive, easy availability of affordable surrogacy, and supportive reimbursement policies, are also anticipated to drive the market further.
