According to the latest research by InsightAce Analytic, the global smoking cession market will be valued at US\$ 23.53 Billion in 2021. It is expected to reach US\$ 57.72 Billion by 2030, with a CAGR of 10.78% during a forecast period of 2022-2030.

One of the largest hazards to public health at the moment is the tobacco pandemic. Over 8 A million individuals worldwide are said to die every year as a result of tobacco

usage. However, many tobacco users make an effort to stop using the drug. Smoking Cession is the name given to the process of quitting smoking. However, nicotine addiction is the biggest obstacle to quitting smoking. Smokers who attempt to quit frequently experience the withdrawal

effects of nicotine, including cravings for cigarettes, mood swings, insomnia, constipation, increased appetite, anxiety, depression (usually mild but occasionally severe), difficulty concentrating, irritability, restlessness, tremor, sweating, headaches, abdominal pains, nausea, and disturbed sleep patterns.

The global market for smoking cessation is expanding due to rising health concerns related to smoking and the rising acceptability of smoking

cessation solutions. A few key market trends include increased joint ventures and partnerships, mergers and acquisitions, and product launches. Tobacco addiction can result in several major health issues. Smoking cessation is giving up tobacco use, which lowers the chance of developing diseases linked to smoking. The development of medicines with more efficacy is also anticipated to present a potential opportunity for the market. The enormous untapped market for the industry of smoking cessation in emerging nations is generating a tonne of expansion potential for the global market. However, some factors limiting the growth of the global market include the resistance to the adoption of smoking cessation products, strict regulatory requirements for electronic cigarettes as medical devices, restrictions and bans on the use of electronic cigarettes, and a lack of awareness of nicotine de-addiction products.

North America is anticipated to contribute to the Smoking Cession market because there are more smokers and more people are becoming aware of the health risks linked with smoking. In addition, the Asia Pacific Smoking Cession market is expected to register significant growth due to the enormous patient pool in the area and growing awareness of smoking cessation products. The market is expanding due to the rising incidence of smoking-related health issues in developing nations like China and India.

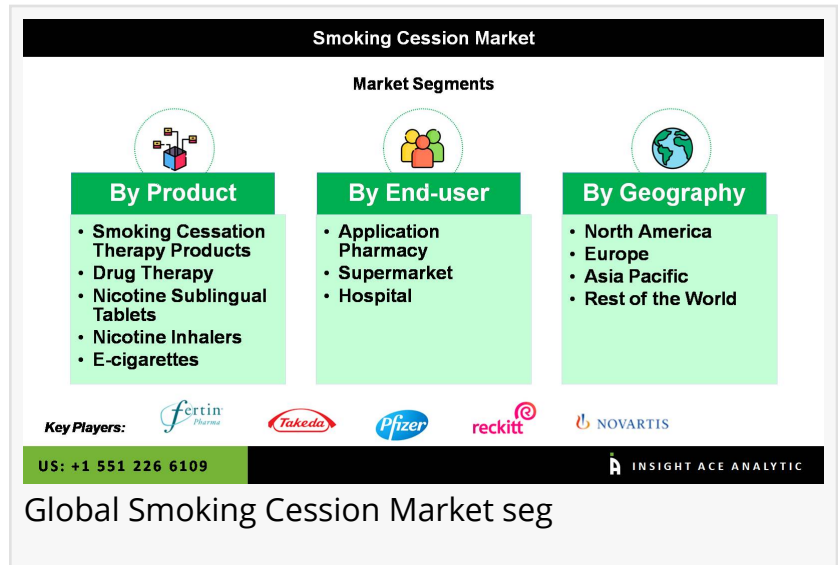

Major market players operating in the Smoking Cession market include ReckittBenckiser, Pfizer, GlaxoSmithKline, Roche, Novartis, Johnson and Johnson, Bayer, Cipla, Takeda Pharmaceuticals, Sanofi, Selecta Biosciences, 22nd Century Limited, Fertin Pharma, Achieve Life Sciences, McNeil AB.

Recent collaborations and agreements in the market:

- In 2020, OTC Nicotine Polacrilex Lozenges were introduced by Dr. Reddy's Laboratories in the US 2020. The supplement lowers withdrawal symptoms like nicotine cravings and is used in conjunction with nicotine replacement treatment (NRT).
